

Options for Dendro DSS2

Customize the DSS2 for your requirements

The Dendro DSS2 truck lift comes with several options to enhance an already complete workshop hero.

DSS2-1800 – Higher Lifting for a Better Working Position

Extend the working height to 1800 mm. This will allow you to work in a more ergonomic position with the truck's undercarriage and lower parts while standing. Being able to work both standing and sitting is important for achieving a varied and healthy working environment.

Faster Lifting

Time is money. When servicing a truck, the last thing you want is to spend time ascending and descending it. Time spent on such mundane things is time that could've been spent on servicing more trucks. Our extra high-performance motor will lift a truck to service height 33% faster; that is to 1800 mm in less than 60 seconds, and that's time well spent.

Double 230V Sockets

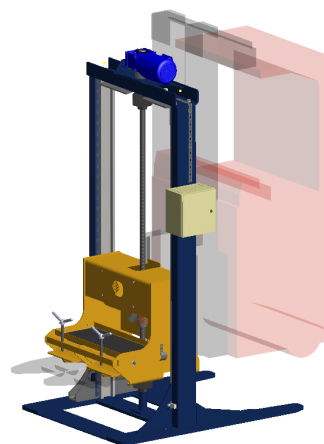

All the necessary tools should be within reach, at all times. Equipping the lift with two extra 230V sockets allows you to have power tools easy to reach. Eliminating the need for extension cords is also a workplace improvement since it reduces the risk of workplace accidents.

Adapters for Jungheinrich and Short Forks

The DSS2 is designed to fit as many fork types as possible. For Jungheinrich pallet stackers, as well as models with short forks, the adapters allow access to the lower side of the forks where arms to the wheels may be located. They are easily attached with strong magnets.

Custom RAL Colours

Not too hot on our Dendro-blue-and-yellow? Maybe you want the DSS2 to blend in with the rest of your workshop or your truck fleet. You can choose any two RAL colour combination to make the lift part of your team.
