

The HEAT TUBE inductor is designed for heating in wells, removing valve seats or boiler tubes.
 Mandatory software version of the generator: V6.52

INDUCTOR IN ACTION

Valve seat

Heating the inside of a tube

RECOMMENDED USES

Optimum use	Possible use	Use Not Recommended
Industrial boiler Valve seat	Mini shovel compensation ring Internal tube heater Removal of galvanic deposits following galvanisation of parts Frettage / Trempe tube preheating inside	Melting parts

Red heat: The diameter of the workpiece must be greater than or equal to the inductor diameter. **+5mm**

Preheating: The diameter of the workpiece must be greater than or equal to the inductor diameter. **+50mm**

PRODUCT COMPATIBILITY

Powerduction :

39LG 058583

39LG 080027

+ Optional 28S adapter (064485)

50LG 055599

110LG 058590

110LG 065246

160LG 057814

+ Optional 32S adapter (064508)

160LG 065253

220LG 066861

220LG 074576
